DVAuction
Broadcasting Real-Time Auctions
Welcome to our 31st annual sale and thank you for your interest in our cattle. Well, we made it through another year and another decade. It seems every year is different, but to say the least, 2019 proved to be very different, especially if you had anything to do with farming. I am writing this in the middle of January, it is 12 degrees below zero and lets just say, we are not done harvesting yet, and leave it at that. Since about the first week of harvest, it has been difficult to get much of anything done outdoors. It seems we are behind on everything, and that includes the sale catalog. I have a feeling it is going to get mailed a bit later than we would like, but like everything else, it will get done.

Getting back to cattle, the char-cross calves have topped the markets all across the country again this fall and winter. The feeders like them and want them, but can’t get enough of them. If you have ever thought about switching to Charolais bulls, this would be a great time to do so, and why not? The Charolais bull will sire calves that wean heavier and top the market in the fall. Or if you feed your cattle, whether back grounding or finishing, they will gain efficiently and you will be able to push the feed to them without worrying about getting them too fat, and yes, they will yield and grade.

The uniformity and quality of this set of bulls runs deep again this year. If you have been attending our sales in the past, you will likely notice a number of our herd sires have changed from previous years. We are always trying to improve what we do by bringing you newer, and hopefully better, genetics to our program. Even though the bulls are uniform, you will find bulls with bigger frames, bulls with medium frame, and even a few smaller framed. We know that there are different wants and needs for different operations. If there is one thing we have learned being in this business, is the simple fact that what one rancher likes is not necessarily what the next rancher likes, especially when it comes to frame scores. We try to stay diversified in that respect. Whatever the case may be for your situation, we think you will find what you are looking for.

When it comes to raising Charolais seedstock, our philosophy has always been a balanced trait selection, never over emphasizing one particular trait. With this approach, we feel our cattle will fit into each phase of the cattle industry from the cow/calf operator to the feeder to slaughter.

The cattle will be at the ranch NE of Reeder until Tuesday, Feb. 11th and then at Bowman Action Market until sale day. If you would like to view the bulls anytime, give us a call.

Plan to join us Friday, Feb. 14th for dinner and the sale. If you are unable to attend the sale, it will be broadcast live on DVAuction.com. If you have any questions or would like to visit about the bulls, call Ryan at 701-928-0788- cell 701-853-2870- home, or Blake 701-206-0272. Thank you for your interest in the bulls. We hope to see you sale day.

Ryan
The information on scrotal measurements will be available on sale day as a supplement sheet. If you need a measurement before sale day, we did measure them as we trimmed them 4-6 weeks before the sale. Most will change a lot in the last month or two, some not so much. So give us a call and we can provide that.

One of our co-high selling bulls in our 2016 sale, going to Stout Charolais in SD, where he has done a great job in their herd. We have used him AI on some of our heifers for several years now; we have been extremely pleased with his calves. There are a few of his bulls in the sale this year that will be top prospects and some could be good heifer bulls. Sires tremendous calving ease with top of the line performance and phenotype. Calves are thick topped, big butted, along with depth of body and good dispositions. His first daughters came into production this past year and we like what we see there also. His Milk EPD will no doubt get better. He has an excellent EPD line for CE, BW, WW, and YW. He is one of those rare herd sires that can about do everything right. Co-owned with Stout Charolais.

A Rushmore son we added from the LT herd in South Dakota. A sire we added in hopes of giving us strong calving ease and maternal traits. He has definitely given us the calving ease with light birth weights. Bulls are moderate in frame, thick topped, deep sided, and they also have big scrotal’s along with super dispositions.

Another of our co-high selling bulls in 2016. A Polar Vortex son that has proven himself to be one of the top complete performance herd sires in the breed with growth and TSI EPD numbers to back it up! Sires smooth, easy calving progeny that grow and grow from the 1st day all the way through their yearling days. Use his sons to add frame, growth, gain-ability, feed conversion and top-notch dispositions. (Just a little side note: during the 2017 breeding season, we had a group of cows with a new herd sire, that ended up never breeding a cow and we never caught it until it was too late. We AI’d all these open cows to this sire and a couple of his sons, so in turn, the birth weights on these calves will be inflated due to dams being in such good shape.) He is the most powerful sire we have ever raised or used.

First year sire who is a son of JS Diamond 4247, a sire that has done such a great job in the Rambur herd in Montana. His calves came easy and grew well. Unfortunately, we only got 6 sons from him this first year, but they all made the sale cut and we think you will like them. EPD's rank in the top 1% of the breed for WW- YW- SC and TSI.

Here is a line bred Polar Vortex son out of a Polar Express daughter. He was born when it was -8 degrees outside but he got up and went. His calves should have excellent vigor at birth. He was also one of the top marbling bulls, indexing at 126 on his IMF. EPDs rank: WW top 7%- YW top 4%- SC top 1% and TSI top 4%.

**A top of the line Polar Express bull here. He is a full brother to HC Polar Express 7035 that sold to Fairview Ranch in 2018 and also a bull we AI’d a few cows to. This is a total performance bull with an 866 # weaning weight to ratio a whopping 116, ranking 2nd out of 75 contemporary. He is also quite possibly the best carcass bull we’ve ever raised that has that much performance behind him. His REA indexed 117 and IMF 136. He is long and extremely deep bodied, a combination that is hard to find, with a super disposition, a trait Polar Express is very strong on. Take a look at these EPD rankings- WW, YW, SC, and TSI all in the top 1%. He is a stud.**

A Polar Express twin born to the oldest cow in the herd, and one of the most prolific cows to ever walk our pastures. She was 14 years old when she had this guy and raised him on her own. Her age may have showed up in his weaning weight, but the genetics are definitely there. Could be a sleeper. EPD’s rank him in the top 6% WW- top 5% YW- top 8% SC-top 6% TSI.

A thick made Polar Express son that will have a lot of friends come sale day. Dam is a thick, well made Westport daughter. May be the thickest Express bull in the offering with excellent length of body, a big scrotal and a super disposition. Great performance with an 834# weaning weight, indexing him at 111 and a 1402# yearling weight, indexing him at 108. EPD’s rank him at 1% for WW and YW- 5% for SC- 2% for TSI.

A big framed Legendary son out of a Polar Express 1st calf heifer that didn’t seem to milk very well. We’re not accustomed to keeping a bull with an 86 index on his WW, let alone, put him in the sale lineup. I would say about 99% of them get steered, but I had a feeling this guy had some growth in him, just knowing his genetics. He has really responded with a 4# ADG and he’s looking better everyday. In a terminal cross situation, this guy will not hurt you one bit and think you will be impressed with his calves. He could be the sleeper.

Super long bodied son of Express with a moderate birth weight. Born to a big, thick, powerful Westport daughter who is heavy milking and considered one of the best females in the herd. You might wonder why this combination didn’t click better than it appears when this calf only indexed 97 at weaning. Well to be honest at only about a week of age he developed an abscess on his jaw which took him some time to get rid of, then as he was finally starting to heal, he developed another abscess in his flank area. He was maybe 4 months old before all of this cleared up, so to say the least, he had a rough start. He has been completely healthy ever since and is really coming into his own and showing his genetic potential, gaining almost 4# per day. This could be the sleeper, one thing is for sure, the genetics for performance are in the package. His calves will impress. A big scrotal on this guy also.

Powerful Elks son that is thick and solidly built. His dam is one of the best Wy Wind females we have ever had. She was 9 yrs. old when she had this guy and still indexed him at 108. She has had 8 natural calves, 6 of them bulls and all good ones. She has put sons in herds like Frenchman Valley Ranch, Rosenow Ranch, Fairview Ranch and the Florian Kuntz herd. She has an average WW ratio of 104 on 8 head, with an average BW of 91.8 lbs on 8 head, which includes this guy. Her calves birth weight have always been very respectable. We didn't really expect a 113# birth weight but that's what it was. He will add good disposition and quality to a set of calves.

One of Blake’s bulls and what a good one he is. An Express 7036 bull that is long and straight over his top line. He has depth that holds true all the way through his body. An excellent performance bull with a 108 WW ratio and has gained well since weaning and has a big ribeye which indexed at 110. He will give you an amazing set of calves no matter what type of cows you use him on. EPD’s rank- WW top 4%- YW top 3%- TSI top 4%.

Weights

Here's a good, light birth weight High Tech son with a 104 WW index. This is the type of bull a lot of cowmen will like. A birth weight like that, out of a big, mature cow and well above average performance while on the cow, what more could you ask for. He is a bull that is very long bodied with good thickness, which all the High Tech's have. This is one of these EPD lines I don’t agree with- CE and BW are accurate but growth EPD's are not even close. Don’t let that worry you, his calves will perform.

I really like this Rushmore son. He kind of stood out this summer. He is moderate framed, long and deep, with a super disposition. He has a slight tan color that he gets from his dam as she is light cream colored. His calving ease EPD ranks in the top 8% while BW ranks in the top 6%. Gained well on feed.

A good Big Ben son born to a Morton 1st calf heifer who is a daughter of our great 591 cow who is coming 15 years old this year. This guy is smooth enough and has some numbers to indicate a heifer bull candidate. We never really thought about using Big Ben on heifers because he had a 97# birth weight, but he has proven his calving ease over the years, so we tried him as a clean up bull on our heifers last year and it did work. So I feel confident that this guy will work on heifers also.

A bull that has come on strong since weaning. Grand dam and great grand dam were both Dams of Distinction. He may not have one of the biggest weaning weights, but be assured that his calves will grow with the best of them and you will be proud of the way this guy looks when he gets mature. He is a high marbling bull, indexing 119 on IMF.
Another good Maximizer bull that really stood out all spring, he was one of those "early bloomers". His great grand dam is the dam of our High Tech 4083 herd sire, and grand dam raised one of the co-high selling bulls last year going to the Rosenow Ranch. There is calving ease, performance, carcass potential and maternal traits in this bloodline. He indexed 110 on his REA and was the #1 bull for REA/CWT.

He is another good Elks son out of a nice, young 612 daughter. These Elks calves are long and stretchy, but still have enough depth of body. There will be much more of his progeny next year. This guy has EPD rankings- WW top 8%- YW top 6%- SC top 8% TSI top 4%.
A Maximizer twin that is really a good calf. He started out small but grew fast and is still doing well on feed. He is built long and smooth, much like all the Max calves are. He has a very respectable EPD line and is one of the best marblers, with a 134 index on IMF.

This may be Rushmore's best son and he is a stud. One of the thickest, deepest and longest bulls in the offering. He holds it all together in a very neat and moderate package. He is smooth muscled, with a huge scrotal. His dam is a young Gridmaker daughter that is headed for the top. His growth EPD's will get better with over an 800# weaning weight and a 1336# yearling weight.

Here's another outstanding Max son that I have really liked all along. Born to a good Morton daughter that got him over 800# on his adjusted weaning weight. He hasn't slowed down since weaning either, with over a 3.5# gain and a 1380# Adj. YW. This is a good bull. He is a ¾ brother to lot 9096 and 9145, if you are looking to keep some close genetics. EPD's rank- WW, YW, and TSI all in the top 15% of the breed.

**A stout made bull that is thick topped, big butted, with a deep body full of red meat and a big ribeye. His dam is another good 6 year old Westport daughter who has an average WW ratio of 102 on 7 calves. Yeah, that's right, 7 calves in 5 years of production, she raised 2 sets of twins her first 2 years. Don't worry about this guys birth weight, he will calve just fine on mature cows. He had only a 29” chest. It will work and you will like his calves.**

An easy calving Max son with a small 26.5” chest at birth. You can see the calving ease when you look at him, he is very smooth made with a narrow head. If you’re looking for a bull to use on some young cows, this guy will fit the bill. He is also a high marbling bull, indexing 134 on IMF, a trait that Maximizer passes on to many of his progeny.

A deep bodied, good dispositioned High Tech son who has come on strong since weaning and came in with one of the best gains. There are some top genetics in this pedigree. His dam raised our high selling bull a few years ago. She is a beautiful, long, deep and smooth bodied Westport daughter with a perfect udder. It never hurts to have a powerful mother.

This may be the most stylish and eye appealing Maximizer son there is. He likes to pose and when he does, he looks like a stud. He’s not the biggest guy out there but he is only an April 1st calf. His grand dam has been a Sterling Damn of Distinction a couple of times. Very good growth and marbling genetics in this bulls’ blood.
A Big Ben son that may easily be the best one he has ever sired. He is a meat and muscle machine. These Big Ben calves are as good as we’ve ever seen for vigor at birth, they get up and go. This guy was no different. The older he gets, the more I am impressed with him. He has gained almost 4# per day since weaning and also shows good carcass numbers, indexing 104 for ribeye and 130 for IMF. He is thick and stout on a moderate frame and he really looks like a bull. His dam is a Morton daughter that also stems from one of my favorite cow families. She is a maternal sister to the dam of Lot 9126. Both of these bulls are very good. A maternal sister to 279 was also the dam of our high selling bull last year that sold to Frenchman Valley Ranch- Saco, MT. So there are a lot of reasons to like this cow family- they produce. Selling 2/3 interest and full possession.

Heifer bull alert. A 64# bull with a 25” chest born to a mature cow. He is super smooth shouldered and should be one of those “sleep easy” heifer bulls. His EPD’s also indicate that, with a 16.3 CE and a -6.7 BW EPD, both which rank easily in the top 1% of the breed. He is deep bodied with a huge scrotal and big ribeye.

Another Rushmore son born to the great Gain & Grade daughter 279. She is one of the most naturally thick, deep sided and deep quartered cows we have. She is good uddered and raises good calves. This guy is another deep bodied, smooth muscled Rushmore, with balanced EPD’s. Even his calving ease and birth weight EPD’s rank in the top 20 and 15% respectfully. He is also one of the best marbling bulls in the offering.

THANK YOU FOR Attending our 31st ANNUAL SALE!!
A high performance Legacy 7039 son. He indexed 104 for weaning and had close to an 800# weaning weight, also had a 108 and a 103 index for REA and IMF respectfully. He has gained well on feed as well. We will definitely have more of these Legacy calves next year.

Another one of Blake’s bulls that is a good Legendary 787 son. He has a well balanced EPD line from front to back. These young bulls will do nothing but get bigger and better. This guy will do someone a lot of good. Gained very well on feed for a younger bull and has a big ribeye that indexed 109.

A moderate birth weight, high marbling Maximizer son whose dam died of hardware disease shortly after he was born. We grafted him on to another cow who seemed to have a hard time keeping track of him. He had a rough first month and I really thought he wouldn't amount to much, but I was wrong. Was truly impressed with how well he looked at weaning time and he hasn't slowed down since. One of Blake's bulls.
Cattle Evaluations use the term Expected Progeny Differences (EPD) to express genetic transmitting ability of a sire for the various traits listed. An EPD is a prediction of how future progeny of a sire are expected to perform in a particular trait relative to other sires in the analysis. The key word is “difference”. The EPD itself does not imply “good” or “bad” performance. But rather, the EPD gives a prediction of the average performance to expect in the performance of a sire’s progeny relative to other sires in the same analysis.

The EPD for a given trait on each animal in the analysis is compared to every other animal in the analysis. The EPD is reported as a plus or minus value in the unit which the trait is measured.

Each EPD reported is accompanied with an Accuracy (ACC) value. ACC is a measure of reliability regarding the EPD evaluation for a performance trait. Accuracy is reported as a decimal number between zero and one: large values indicate greater accuracy and more certainty the EPD will show little change as additional progeny information is obtained.

**Birth Weight EPD (BW)** The expected difference in average birth weight (pounds) of progeny. Birth weight reflects prenatal growth.

**Calving Ease Direct (CE)** is expressed as a difference in percentage of unassisted births in first-calf heifers. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire’s calves will be born when bred to first-calf heifers.

**Calving Ease Maternal (MCE)** is expressed as a difference in percentage of unassisted births in first-calf daughters. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire’s daughters will calve as first-calf heifers when compared to daughters of other sires.

**Weaning Weight EPD (WW)** The expected difference in average weaning weight of calves. The evaluation reflects the genetic influence on pre-weaning growth rate.

**Yearling Weight EPD (YW)** The expected difference in average yearling weight of progeny. The evaluation reflects genetic influence on both pre-weaning and post-weaning growth rate.

**Maternal Milk EPD (Milk)** The genetic ability of a sire’s or dam’s daughters to express in pounds of weaning weight in her calves due to her maternal ability through mothering instinct and milk.

**Total Maternal EPD (MW)** A value to predict the weaning weight performance of calves from a animal’s daughters due to genetics for growth and maternal ability. Total Maternal is calculated by adding ½ the WWT EPD to the Maternal Milk EPD.

**Scrotal Circumference EPD (SC)** The expected difference in scrotal circumference (expressed in centimeters) of a bull’s or dam’s male offspring at yearling compared to progeny of all other animals evaluated. Research has also indicated a relationship between increased SC EPD and decreased age at puberty for daughters.

**Terminal Sire Index (TSI)** The formal method of combing Expected Progeny Differences (EPD) – BW, WWT, YWT, REA, HCW, MARB and FAT – into one single value on which to base selection decisions. The TSI uses estimates of the genetic relationships between traits with an economic default value based on three year rolling USDA data.

Carcass records are adjusted to an age constant endpoint. Therefore selection based on any or all of the carcass merit EPD are comparable among cattle at the same age endpoint. For example selection based on increased EPD for carcass weight will result in heavier carcass weights than those animals with lower EPD for carcass weights when the cattle are harvested at the same age.
Absentee Bidders:
If for some reason you are unable to make it to the sale, you can give Ryan or one of the ring men your bid, in the strictest of confidence. Phone bids can also be taken the day of the sale by Ryan or one of the ring men. Please let us know ahead of sale time if you need assistance so we have ample time to prepare.

Ryan home: 701.853.2870
Ryan cell: 701.928.0788
Blake cell: 701.206.0272
Bowman Auction Market: 701.523.0600

Also, again this year, will be broadcasting the sale live on DVAuction. Information on how to use the website can be found below.

Feeding Regimen:
The bulls have been fed the same way as they have been for the past 20 years. They are fed a high fiber pellet that is formulated for growing bulls out without getting them fat and fleshy. It is a very safe feed and can actually be fed in self-feeders, although we have never fed that way. Our bulls have always been bucket fed twice a day plus fence line fed all the long grass hay they want- they get absolutely no silage. We feel this way of feeding the bulls is ideal for getting them in the right condition for breeding and still allows them the ability to show how they grow on feed. This will keep good feet under them, and they are more apt to hold their condition.

Ultrasound Carcass Data
We have been a little reluctant to put this in writing, but feel it is worth saying. First of all, our bulls are probably some of the leanest group of bulls you will find anywhere year after year. Over the last 14 years that we have been ultrasoninding, our bulls have averaged .15 on their back fat (extremely lean). We feed them the way we do to ensure sound feet, optimal body condition for breeding and to enhance fertility. Now we know ultrasound data should not be compared between different herds because feed and management affects all ultrasound data. But when you look at average back fat on a group, it will tell you a lot about how hard they are fed. The hotter the feed, the more fat they will put on. Most people may not even think about it but the more back fat there is, the bigger the ribeye will be and likely more marbling because fat usually correlates to higher marbling scores. If we chose to, we could feed our bulls a hotter ration, get them bigger faster, get bigger yearling weights, bigger ribeyes, better marbling, and bigger scrotals (the fat will go there too); but that is not what we are about. When you buy our bulls, we want them to hold condition, keep sound feet under them, and be fertile so they can go out and do what they are meant to do - breed your cows.
GUARANTEE:
Bulls are guaranteed breeders through the first breeding season. If a breeding problem has been confirmed by a veterinarian, the buyer must notify the seller and return the bull in good health and in good condition for the guarantee to apply. The buyer will be given a satisfactory replacement, your money back, or credit towards the purchase of another bull in the next sale. In no case will the seller be responsible for more than the purchase price. Honeyman Charolais will make every effort to ensure that you, our customer, are fully satisfied with the bulls purchased. If for some other reason you are not pleased with your bull, let us know and we will try to rectify the situation. We try to do everything we can to satisfy our customers.

REGISTRATION:
All of the bulls selling are purebred and registered with the AICA. Papers will be transferred to the new owner after delivery of the bulls.

2/3 INTEREST/FULL POSSESSION:
Buyers of these bulls would own full possession, all salvage value, and control his destiny. We are reserving the option to collect semen from the bull, at some point and time, at the buyers' convenience, if we choose. Also, in the case of semen sales, this 1/3 semen interest gives us a continuing business involvement and would also provide extra income to the buyer.

DELIVERY AND FEEDING:
Honeyman Charolais will feed all bulls sold in the sale until April 1, 2020, free of charge. We offer this to our customers for their convenience, and keeping the bulls on the same ration for a longer period of time allows them to keep growing and allows us to get them in the right condition for the breeding season. After April 1, we will deliver the bulls up to 250 miles, free of charge. For delivery later than that, we will charge a minimal fee or work with you on trucking arrangements.

CHEST MEASUREMENTS:
For many years we have been measuring the chest circumference on all of our calves. They are measured at the same time we take the birth weights. We feel it is as valuable as the birth weight itself in measuring ease of calving. We maintain the thought that a calf with a 100# birth weight and a 28 inch chest will calve just as easily as a calf with an 85# birth weight and a 28 inch chest. In our program every calf with a 31 inch chest or greater is steered.

SEMEN TESTING - DISCOUNTS:
For those of you who want us to feed your bulls until Apr. 1, 2020, we will have them semen tested sometime in late March, at our expense, before we deliver them to you.

For those who take your bulls home after the sale, you will be given a $100 discount on the purchase price of that bull, but if you choose to have them semen tested, that expense will be yours.

VIEWING THE BULLS:
The bulls may be viewed at the ranch northeast of Reeder until Tuesday the 11th of February, after that they will be at Bowman Auction Market until sale day. If you would like to look at the bulls anytime we would be glad to show them to you or if you have any questions please call Ryan at 701.853.2870 (home) or on sale day you can reach him at 701.928.0788 (cell) or at 701.206.0272 (Blake's cell).

ALL EPD's in the catalog are the NEW 2020 EPDs.
